### Description

The Radar Sensor uses FMCW radar technology to detect stationary objects and people in blind spots. This advanced system alerts the operator with both visual and audible warnings.

The system has three distinct length and width modes, enabling the operator to adjust the Display Unit to fit their needs.

The system's capability of being able to determine whether an object is approaching or moving away from the sensor, helps to limit the number of false detections caused by objects of no concern encroaching on the detection area.

The commercial grade heavy-duty system has an IP69K waterproof rating, a simple installation, and works perfectly in all weather conditions.

### Key Features

- Programmable Radar Sensor
